Application No.

Continuation Sh et (PTO-303) 09/660,195

Continuation of 2. NOTE: The amendments to independent claims 1 and 16 recite new features of the invention which were not previously claimed, searched, or considered in the examination of the application. In particular, the recitation drawn to the fluid sensor introduces new structural limitations of the sensor, including a fluid passage within the sensor wherein the internal diameter of the fluid passage within the sensor is the same size as the blood passage within the cartridge. Since applicant bases the patentability of his device on the size of the passage within the pressure sensor, the limitations drawn to the size of the passage require further consideration.
